

Deliver More Predictable and Strategic Outcomes Than Ever Before

An effective Project and Portfolio Management (PPM) Solution will give you visibility into which initiatives to prioritize to help you reach your business objectives (e.g. generate the most revenue or deliver the biggest cost savings)– before you start allocating resources to them. Once efforts are underway, you can keep tabs on which projects are meeting those promised revenue streams, savings and other objectives. And with this powerful insight, you can continually drive results and react quickly to changing business needs.

Cherwell, a global leader in Enterprise Service Management (ESM), and Planview, a global market leader in Portfolio Management and Work Management solutions, have partnered to bring you the most effective PPM solution available today. Together, Cherwell and Planview equip you to deliver more predictable and strategic outcomes than ever before, even as the world continues to become more unpredictable.

Our integration makes project and portfolio management seamless and scalable across the organization. Drive more business results, get a centralized view of the enterprise, break down silos and provide a better employee experience. These are just a few of the benefits of merging a no-code ESM platform with a sophisticated and robust PPM solution.

The Planview Task Integration mApp Solution uses the Planview API to integrate Tasks into Cherwell Service Management (CSM). The mApp Solution contains recommended best practices for syncing data between CSM and Planview PPM Pro. Technicians can see and work on all IT Tasks alongside any Project-related Tasks.

Read on to learn more about the capabilities of Planview PPM.

The right PPM solution can significantly improve your business outcomes. Finding the one that fits your organization best depends on its size, level of maturity, the kinds of projects executed, the number of projects delivered and other factors. Keep reading to see how Planview's PPM Pro solution fits your organizational goals.
